Red Hat Enterprise Linux- Disaster Recovery

Pricing policy for Disaster Recovery is as follows:

- Hot Backups -- 100% regular subscription price
- Warm Backups -- 50% regular subscription price
- Cold Backups -- 0% regular subscription price

Definitions:

- Hot Backups – Server is frequently turned on and ready to move into production mode immediately. This is typically what “failovers” do within a cluster.
- Warm Backups – Server is turned on periodically to receive backups of data from the production servers. For example, warm backups are used in mirroring, replication, and log-shipping scenarios.
- Cold Backups – Server has software installed and configured, but then is turned off until the disaster occurs or for periodic disaster recovery procedure tests. For RHEL, this means I we allow the customer to preload the bits as a courtesy. However, RHN can't be used to update the system until the disaster happens. Then, the paid subscription on the failed machine is
